Trisotech's **DTEKTION ENGINE** was selected among the finalists for the 2004 OCTAS

**MONTREAL, APRIL 14th 2004** – Trisotech's **DTEKTION ENGINE** has been selected as a finalist for the prestigious 2004 OCTAS awards in the Technological Innovation Category (200 or less employees).

The **DTEKTION ENGINE** is an intelligent job/candidate profile matching system. This technology ensures the relevancy of candidate profiles suggested by an online recruiting service. More precisely, the **DTEKTION ENGINE** is a flexible engine allowing the assembly and manipulation of intelligent filters via a Java library implementing several Artificial Intelligence and Information Retrieval technologies.

The winner among the four finalists in this category will be known on May 29.

#### **About Trisotech**

Founded in 1996 with its corporate office in Montreal, Trisotech is a software consulting firm providing optimization solutions for Human Capital Management. There are two streams to Trisotech solutions: TECHNOLOGY in support of the Human Capital and HUMAN CAPITAL in support of Technology.

Solutions offered via the first stream aim to improve the agility and the productivity of various human resources initiatives by offering a common technological framework for modeling, analyzing, automating and optimizing processes supporting Human Capital Management, all independently of back-office applications and legacy systems. Under the second stream, Trisotech offers a complete range of software consulting: strategic consulting, project staffing, personalized recruiting services and e-recruiting.
