TRISOTECH PERFORMS A BPM MATURITY STUDY IN QUEBEC

MONTREAL, October 17, 2005 – Within its activities related to Business Process Modeling and Automation (BPM), Trisotech is running a BPM maturity study in Quebec. This study is based upon a survey with business people on the state and expectation of BPM solution implementation. The data from this survey will provide the first BPM statistics originating from Quebec.

This initiative started in April 2005 and the first results will be published within 2006's first quarter. Denis Gagné, chief executive officer and chief technology officer positioned this initiative as follows: "Our objective is to collect and enrich information allowing us to present the status and trends of the Quebec BPM penetration and usage level. Others studies exist, but they provide US based information."

The survey questions allows for the grouping and analysis of results within the following topics:

- A.** Business problems or pains faced by their enterprise;
- B.** Actual interest and implementation level of a BPM solution;
- C.** Motivation factors, and realised or expected benefits of a BPM implementation;
- D.** Obstacles and barriers faced or expected during implementation.

Up to now, more than fifty professionals, managers and executives, directly involved in BPM initiatives, have completed the survey.
